Your partner in doors

Impressive variety

LEBO doors are as individual as you are! They complement harmoniously your lifestyle and fulfil your dreams about housing! This is why LEBO doors are available in such a variety of designs. They are setting tomorrow's lifestyle trends and provide a delightful ambience in your home so you can really enjoy your living! Whether your lifestyle is individual, experimental, classic or simple: Discover the great variety of LEBO now!

For every style and every budget

You renovate an old building, modernise your home or you make your personal living dream come true in a new building? LEBO has the right offer for every style and almost every budget... not only in terms of the variety of our door designs and finishes, but also in the selection of possible accessories and additional features. Open to pleasure!

Sustainable and healthy

Like no other building material, wood provides the direct feel of nature! This is probably why we love to live surrounded by wood. Measures adopted to protect and maintain the unique resource of our woodlands are therefore becoming increasingly important. Because we take this responsibility very seriously, a gentle and sustainable way of dealing with wood and wooden materials is firmly built into our principles for working. Beside to the variety of our range, LEBO attaches special importance to the use of environmentally friendly materials.

Experience since 1871

Since 1871 we „build“ doors. Since our foundation over 150 years ago things have changed a lot, but our enthusiasm for high-quality door craft and first-class service has remained until today. And it does not just grow with every day, but with every door that leaves our factory. For ensuring highest precision in the serial production, modern technology is indispensable, however machines cannot replace our craft. At many doors we once again put our hands in order to perfect the result.

Not cheaper, but better

On average you live 15 to 20 years with your doors. It pays to invest in quality and timeless design. LEBO doors offer lasting value: individual options for the design, harmoniously matching equipment and above all high quality, guaranteed by the use of only high-quality raw materials, highest precision in the processing and strict quality controls before, during and after the manufacturing.

Familiar

LEBO supplies the specialist trade expertly and reliably with innovative door systems. These long-standing relationships are based on mutual trust and respect. At the LEBO specialist trade you will therefore always benefit from expert advice and professional service. Being so close to the trade, we get to know your opinion and can therefore improve our range accordingly. We live this teamwork in more than 40 countries worldwide with our local partners – please check our website for a LEBO specialist close to you!

Saving paper is easily done by using the digital version of this catalog: You can also browse this catalog on our website or discover other helpful information in our LEBO online world.

Smooth door set, Lebolit PREMIUM Nordic Cross Oak, single leaf, RR frame, hinges V4426 WF

Just 5 steps to your dream door

1

Find your own type of style!

It is not always easy to know what you really want. In our style worlds we show you several different styles of living. Browse through them and find the one that is right for you! Whether it is classic, modern, timeless or country style – find the right one for you!

2

Choose your own design for your door

You have chosen your design but how should your door look? Choose the right look for our dream door from our range. Reestrained or striking, playful or classical. Or would you prefer one with a light opening or made entirely of glass? We live this teamwork in more than 40 countries worldwide with our local partners – please check our website for a LEBO specialist close to you!

3

Choose your surface

See, feel, wonder – in the exhibitions of our LEBO partners worldwide there is a large selection of products to experience with all senses. Feel the difference between durable CPL, high quality painted surfaces or real wood.

4

Let your specialist dealer advise you on site.

Professionals from the skilled trades advise you for LEBO locally. From the first sketch to the planning and the site measuring up to the finished installation, our LEBO dealers are at your side! On request, they also guarantee the professional and perfect installation of your new LEBO doors. With our LEBO professionals, the new construction or renovation is completely reliable and creates a beautiful result.

5

Enjoy and look after your door.

It is all finished. Your door has been installed, thoroughly cleaned and everything is the way you want it to be. You can enjoy seeing and using each day afresh. To keep it that way you have to care for it properly. We have all necessary information for you to do this on our website and YouTube-Channel. Enjoy your door!

Care tips for a long
door life

LEBO doors

Made for your life

Create your home design the way you want it and in your own style. LEBO doors help you to create the home of your dreams! Versatile, style-conscious and individual. Ideally suited to the way you live!

Whether you love a playful country house look or prefer classical style with some breaks. Whether you want a natural look with wood or to live in a more Puristic style. Discover within the different style worlds in our catalogue the right doors for your way of living!

Roots

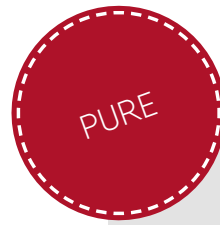

Living with natural materials

Nothing in life is perfect. Restrained colours, rugged elegance and a natural ambience. Wood as the central element of furniture. Authentic and conscious of its own roots.

Do you love living in a natural way? Then take a look at our doors in the authentic Roots style!

Pure

Living in the
here and now

Contemporary living with clear lines.
Reduced to the most essential.
Puristic and straight-lined ambience
with interesting colour accents.
High demands on living designs
and materials.

Do you like to live in a contemporary style? Then you need your doors in a modern and pure style!

Vintage

Living in a country house style

A tranquil and harmonious ambience. Bright, cheerful colours. Accessories made with attention to detail and thoughtfully combined elements. Collected, used and new. Creatively installed with individual charm.

Is this playful country house style your dream design? Then make it come true with our vintage-style doors!

Timeless

Living in a
contemporary
classic design

A combination of modern and traditional elements. Calm, neutral colours. Classic designs which never go out of fashion! Exciting accents and breaks in style. The ambience exudes peace and tranquility!

Is your style of living so equally timeless? You will love our timeless-style doors!

Your door. Your colour.

The lacquer collection

Smooth door, lacquered as per RAL 7016 grey anthracite, single leaf, full-flush door set

Lacquer collection

Real design classics

The lacquered doors from LEBO bring restrained elegance into your living room. Their timeless designs harmonise equally well with modern and classic furnishing styles.

With their easy-care surfaces and varied light openings, you can use our products to create personalised rooms in your own style! Thanks to the wide range of designs, impressive handles and fittings you can fulfil all your wishes about the way you want to live at home!

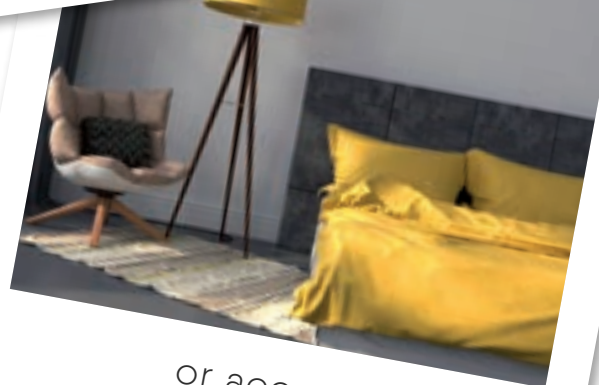

Harmonious colour concepts

Make your rooms inviting places with pleasant colours and the right decorations! The lacquered doors from LEBO are perfect for this!

Or place accents in your own personal style!

or accents

White & coloured lacquer doors

In addition to the design and the „technical features“, a flawless paintwork is the most important aspect when buying new doors.

This should be robust and abrasion-resistant, environmentally friendly and odorless and at the same time correspond to the preference of the owner.

Namely, **the colour is optimally matched to the current trend colours for window frames, sockets and light switches.**

Depending on the door model, the structure of our paintwork is different and sometimes quite complex.

Not only are different lacquers used, but also different technologies apply them, which combined make a door finish perfect.

Price differences at LEBO therefore not only result from the often detailed doors, but also from their high-quality workmanship.

And as this topic is very important in your price comparison and also is our passion, we would be happy to explain the details to you...

The basis for all doors (FX)

The so-called “primer” fulfills several tasks in the first step of lacquering. In addition to the increased resistance to environmental influences and impacts, the primer evens out minimal irregularities on the surface and prepares them for an even formation of the lacquer coat.

After the primer has been applied, the door is sanded. Sanding ensures even better absorption and adhesion of the lacquer layer on the substrate and a trouble-free coating process. Only after sanding does the door get its final colour from the lacquering process.

Roller-lacquering Process (W1)

In our roller-lacquering system, after the primer the top coat (hydro/water-based lacquer) is efficiently applied to the door leafs using rotating rollers.

Roller/Spray Lacquering Process (WS1)

In our roller/spray lacquering process, after the primer the top coat (hydro/water-based lacquer) is applied using different methods. Rotating rollers efficiently apply the first layer of lacquer to the door leafs. This is followed by additional lacquer application using modern robots.

Spray-lacquering Process

In our spray-lacquering process, after priming the top coat (hydro/water-based lacquer) is applied exclusively using modern robots in the desired surface colour. The paint is finely atomised and gets into the smallest pores. The result is a pleasantly smooth and gentle surface with a beautiful gloss level that is extremely hard-wearing and abrasion-resistant. Our quality and the according price differences result from the number of spraying runs on our modern machines.

Manual Lacquering (HX)

Effect lacquers such as „Mixture“ or lacquering as per RAL/NCS are by default applied manually at LEBO. Also more delicate models receive this high-quality manual finish. In a separate spray booth, a 2-component lacquer with a perfectly matched mixing ratio of hardener and paint is applied over the entire surface of the door leaf using a spray gun. The intermediate sanding is done by hand and ensures the perfect absorption and adhesion of the top coat. In addition to reducing overspray, the result is a visibly calm, flawless finish.

White & coloured lacquer doors

Made especially for you

Custom-tailored for you – this is the effect of the doors in the „custom-milled“ range. We can realise your personal wishes by providing individual milling on the surfaces and then applying several coats of lacquer in an elaborate spraying process.

Whether for storage, or for living rooms; names, logos and icons can be milled onto the door leaf. This provides a higher quality solution than the one offered by plates or self-adhesive labels.

A wide variety of possible use.

Custom-milled doors are ideally suited for use as “signposts.” There is now no need to use less attractive signs or stickers! Here are some suggestions:

Be creative and design a door yourself!

- Send us the motif you would like to use as a vectorised .dxf file.
- Please make sure you observe the copyright of any image file you send us. This means that you must not send pictures belonging to anyone else without the owner's express permission.
- Check the sketch which you receive from us and your door will go into production as soon as you have approved it.

Put your door in the limelight: our RP09 frame

Hinges V 4426 WFZK golden

Handles from your retailer

Cottage 31, White Lacquer 9010, double-leaf, Frame RE, Hinges V4426 WF Soft

This classic design combines timeless elegance with a very attractive look. The Cottage series is distinguished by its combination of inlay framework battens and its millings. The multi-coated lacquering creates a really impressive surface quality.

Incidentally, a double-leaf door is not just a valuable eye-catcher but also provides an excellent solution for wall openings which are not of the normal size as the door leaves can be chosen in different sizes.

White Lacquer

Finesse 31, Lacquer as per RAL 7047, single leaf, Frame RR incl. V-groove, Hinges V4426 WF Soft

“Classic goes 21st century“

The lines are straight and yet tension is created through the interplay of light and shade on the milling profile.

The hand lacquering of the surfaces is really impressive. With our extensive range of models and light openings, we are always trying to leave no wish unfulfilled.

Harmonious: RP 17 frame

Copenhagen 31, White Lacquer 9010, single leaf, Frame RP 17, Hinges V4426 WF

Copenhagen series - life in the Nordic country house style

The Nordic style is characterised by light and natural colours, coupled with unpretentious design and clear shapes. This ambience fulfils your need for a light and pleasant mood. The Copenhagen series fits perfectly into this furnishing: the wide milling has clear lines, the plain design is nevertheless homely.

The particular **advantages:**

- ✓ Available in White Lacquer 9010, 9016, and RAL/NCS
- ✓ Particularly harmonious in combination with the RP17 frame
- ✓ Lush, multi-coat lacquering
- ✓ Discreet 25mm wide millings
- ✓ Attractive value for money offer for country house doors

This fits! – Find the right accessories!

The frame, with its squared jamb, squared 60 mm-wide architrave and a V-groove, has a high value lacquered finish, is easy to install and fits perfectly with your new Classic door.

This fits: the EE frame with V-groove

Classic 32, Lacquer as per RAL 240 8010, single leaf, Frame EE incl. V-groove, Hinges V4426 WF Soft

A simple design with clear lines and high quality workmanship make the Classic series stand out! In contrast to a door which consists of two or more parts, the subdivisions here are milled. This guarantees increased stability as well as preventing an uneven formation of joints.

The surface quality is guaranteed by applying several coats of lacquer with sanding between each coat. We have many models with light openings – so just select out of our glazing range to let additional light into your rooms.

White Lacquer

TIMELESS

Country 40, White Lacquer 9010, 2 LA with glazing Satinato, Frame RE, Hinges V4426 WF

Country style, relaxed and timeless

Both country in style and pleasant, while both elegant and timeless too, the Country series is, thanks to its many different models, extremely versatile and allows you many possible design variations. You can therefore realise your own particular vision with a large range of subdivisions and glass options to choose from. The lacquer is applied by hand with sanding between each coat and the particular depth of the milling creates a striking effect.

Country 40

Country 41

Country 20 LA SPR (trellis frame)

Like more light?

The addition of a light opening does not just add value to the door, but the use of glass also allows more light into your rooms to really brighten up your home. The glazing beads are even flush in the doors of the Country series. You can find many of our different types of glass from page 136 onwards.

Trellis frames?

A trellis frame is a decorative element which above all can add "a certain something" to larger light openings.

White Lacquer

The visual unity created by the door surface and the glazing beads provides a harmonious whole.

If you want to let lots of light into your rooms or are looking for an alternative to full-glass doors, you are in the right place! The white lacquer surface provides plenty of scope for the addition of glass.

White Lacquer

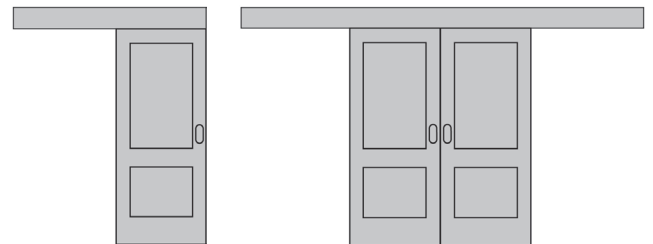

Creating more space and the maximum use of this space are becoming increasingly important for us. This is why sliding doors which either "disappear into the wall" or run along in front of it provide an obvious solution!

The use of sliding doors becomes even more attractive if you can find the right one to suit your personal taste from our wide range of models and styles. Of course sliding doors also simply invite the use of glass! Look at the examples of Luana on the right. Nice, isn't it?

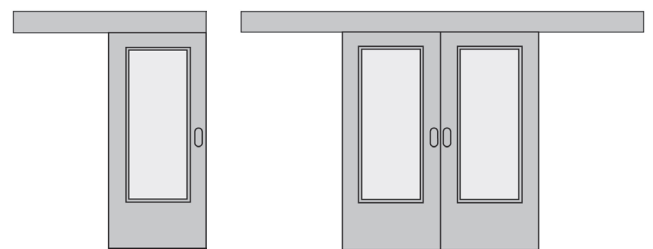

Sliding door running inside the wall, available with handle bar or shell handle, door model: Luana 1 white lacquer 9010.

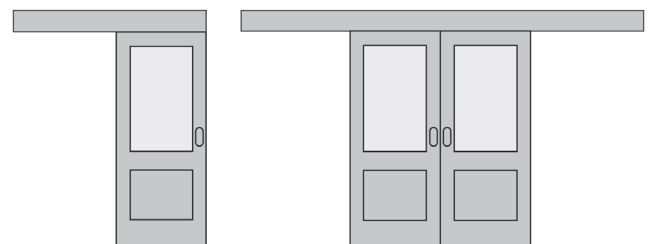

Single or double-leaf sliding doors.

These are available with light openings in different models and with various types of glass to suit your taste. You can find the different types of glass in this catalogue up from page 134.

Of course these can also be used for Style and Design doors, with or without light openings.

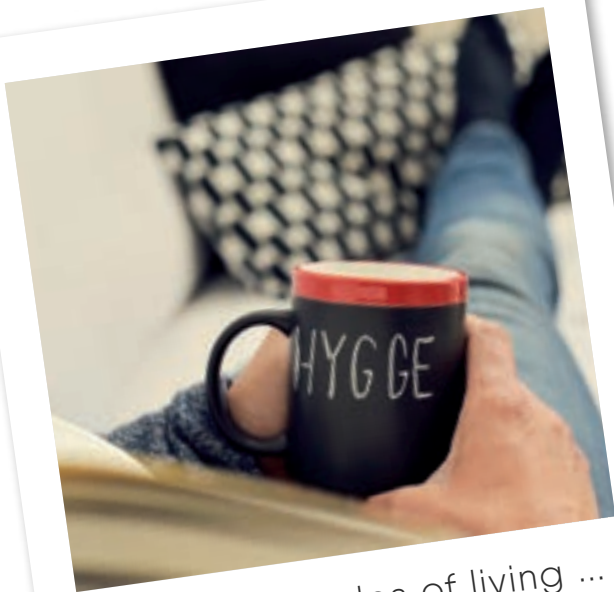

The wooden sliding-door system 2011 running in front of the wall, available with handle bar or shell handle (see page 132), door model: Luana 1 white lacquer 9010.

Choose the wood alternative!

Robust CPL doors

For natural styles of living ...

Thanks to our wide range of surface designs, our CPL doors go wonderfully well with modern or natural living rooms.

... or modern Looks

Completely according to your taste

Decorative CPL doors

Varied and hard-wearing

LEBOLIT (CPL) is a multi-layered laminate, made of decor papers which have been impregnated with melamine resin, artificial resin or protective lacquers. Its construction is comparable with that of laminate floors and kitchen worktop surfaces and it is therefore ideally suited to areas which undergo a lot of hard wear.

LEBOLIT doors from LEBO suit every style of living thanks to our great range of decors and colours. Discover it for yourself!

Lebolit PREMIUM
Oak Knotty

Lebolit PREMIUM
Oak Knotty Cross

NEW!

Expressiveness and naturalness

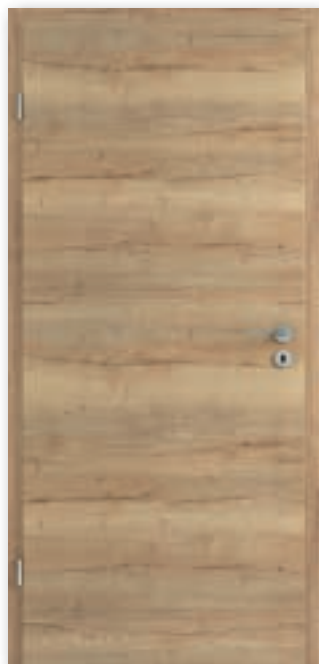

Oak has long since lost its old-fashioned image – nowadays you often see the structured surface as a floor, kitchen worktop or living room furniture. In combination with plain, white surfaces or kitchen fronts, the oak surfaces appear light and modern, but still meet the desire for nature and authenticity in the living space with their striking knots and cracks.

The **new Lebolit PREMIUM Oak Knotty** with its resistant surface and rustic shade is particularly popular for door sets.

The new surface can be easily combined with modern materials such as glass or metal. For example with our high-quality brushed pilaster strips in a stainless-steel finish (Luana Metal) or in combination with the versatile light openings.

The **new Lebolit PREMIUM Oak Winter grey** is just as extensive. Its rough-sawn elements and the planked decor make it look very authentic. The colour scheme can be combined very well with uni-colours such as beige, grey and blue tones. Being available also as space-saving **sliding-door systems** perfectly rounds off the versatile application possibilities of this new surface.

Clear glass

Satinato

Gropius 1, Lebolit PREMIUM Aland Pine Polar, single leaf, Frame RRAD, Hinges V4426 WF

This special series of designs is available in five veneer or four CPL in the style of the famous architect Walter Gropius, one of the founders of the modern architectural style.

CPL sliding-door system

Gain more space!

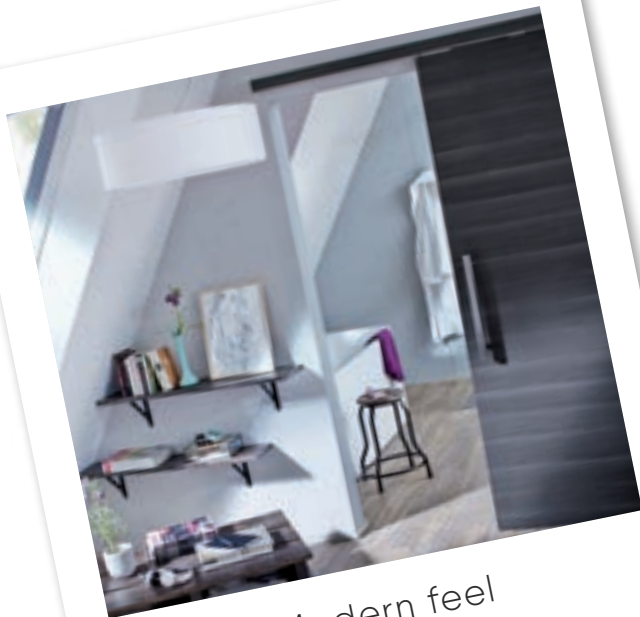

Say goodbye to problem zones in your house!

With the LEBO sliding-door systems you can make the best use of small rooms.

Sliding doors have the clear advantage over swing doors that they do not need any space for the door to swing open. They are therefore miraculous space savers.

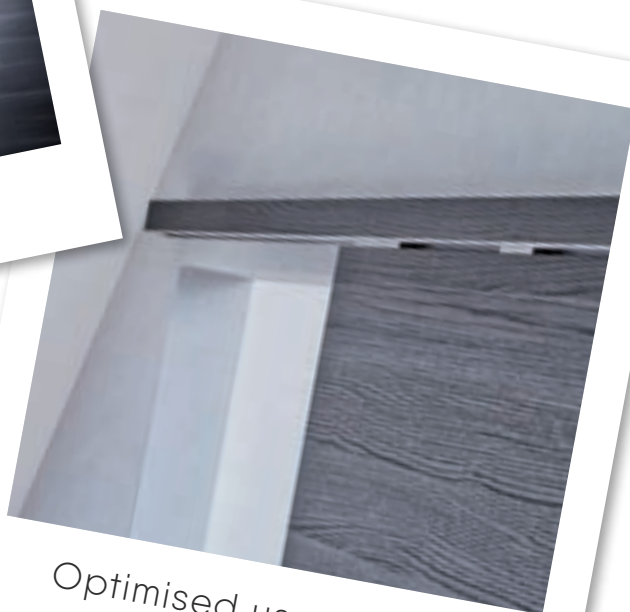

According to the particular design, they either fit neatly into the wall or, as with our FIT systems, they run along in front of an existing wall.

Modern feel

The upper guide tracks can be fitted onto the ceiling or onto a wall.

Optimised use of space

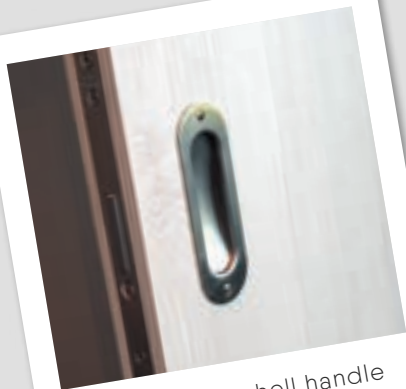

FIT sliding-door system, surface Lebolit NATURE Oak Anthracite Cross*, handle bar squared

*This surface is discontinued.

The benefits of this system lie in the fact that it can be retrospectively integrated into any room architecture, even without extensive conversion work and independently of the ceiling construction. This system can also be used for combinations of wood and glass and is available with a soft closing on both sides.

Lebolit White 9016

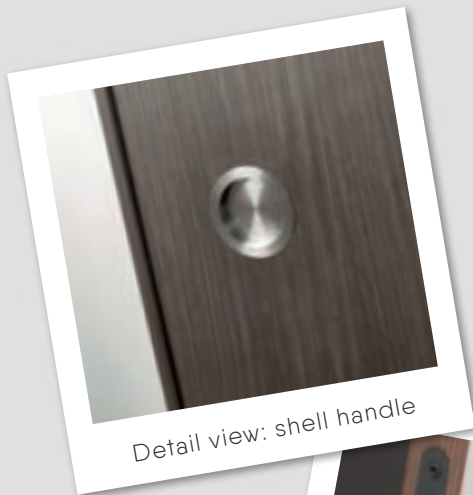

Pocket sliding doors

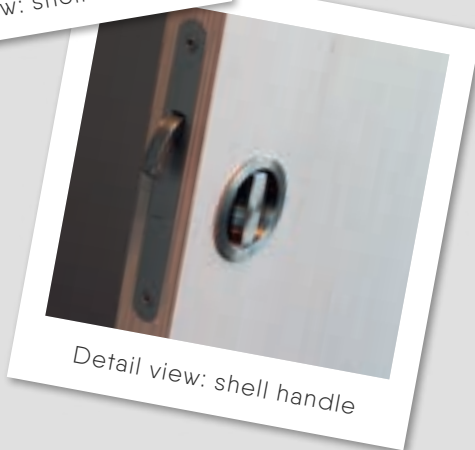

Sliding doors to be installed inside the wall must be planned well in advance because it is very difficult to incorporate them into a house once it has been built. This is because the sliding rails must run inside the wall.

You should also bear in mind that a sliding door inside the wall and including handle bar will also slightly reduce the width of the passage way because the leaf will remain in the opening when it is open. A door leaf with finger pull ring can be slid into the wall completely.

Pocket and wall-mounted sliding-door systems

Detail view: shell handle

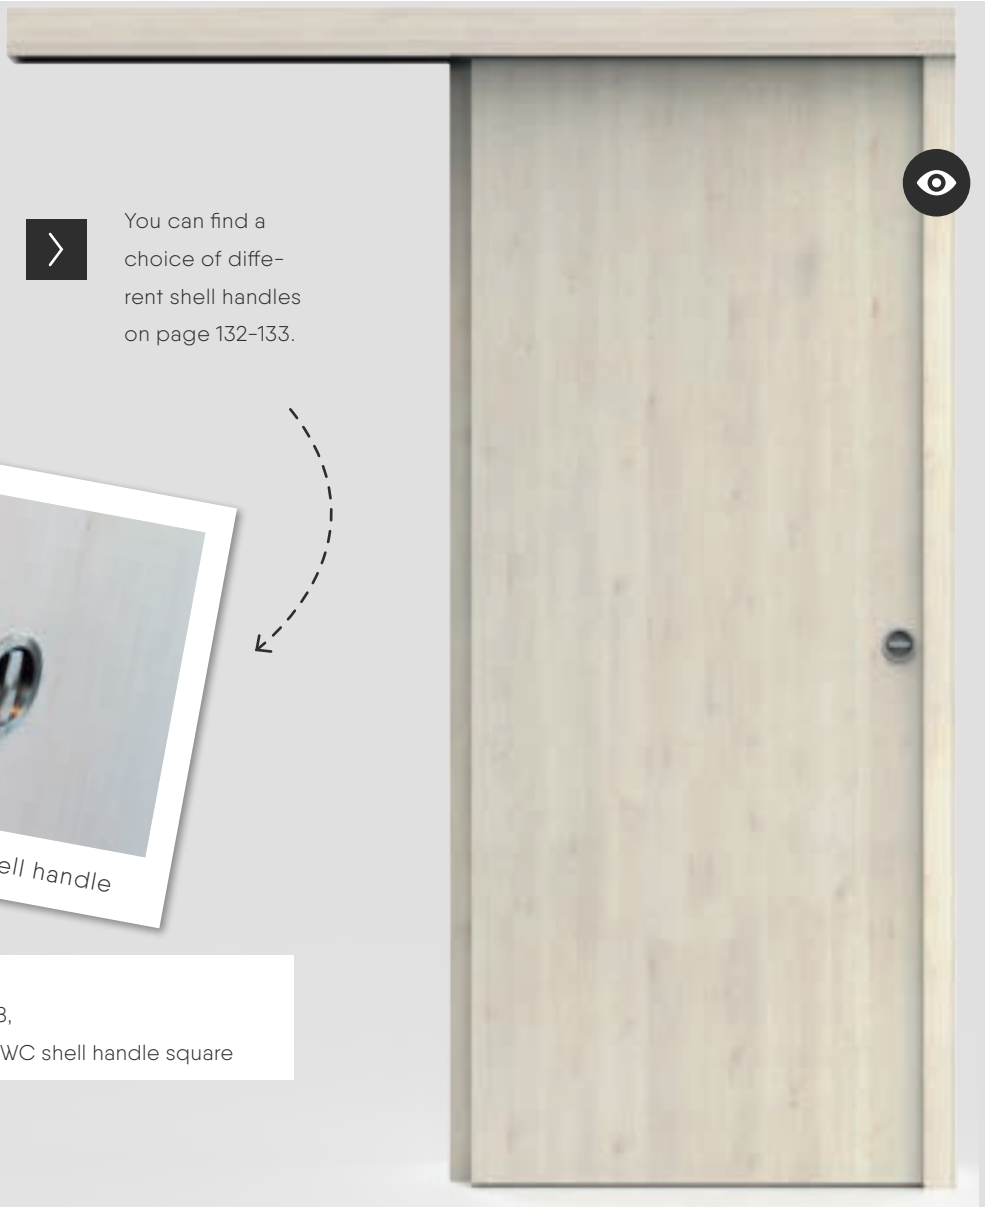

Detail view: shell handle

You can find a choice of different shell handles on page 132-133.

Wall-mounted sliding-door system
Lebolit NATURE Oak Anthracite, Metaopt 18,
with light opening Vario S, Glass Satinato, WC shell handle square

Wall-mounted sliding door

Sliding doors which run in front of the wall remain visible and can become a prominent design element in the room. Their great advantage is their sustainable integration into the room. Sliding doors can be used above all to close up wall openings while saving space at the same time. They can be used equally well in modern buildings as well as when renovating older buildings. Your specialist dealer will advise you on site and give you some important tips on the choice of your LEBO door as well as on its proper installation.

Live authentically

Natural wood doors

Natural wood doors

Inimitably authentic and cosy

Do you like to surround yourself in your home with natural materials and high quality surfaces and are also concerned to know where they came from? Then we are happy to recommend to you our real wood veneer collection!

Wood is a healthy material in the sense that it has many health-promoting properties. People with allergies, for example, benefit from the fact that wood is not electrostatically charged and therefore does not attract allergens such as dust.

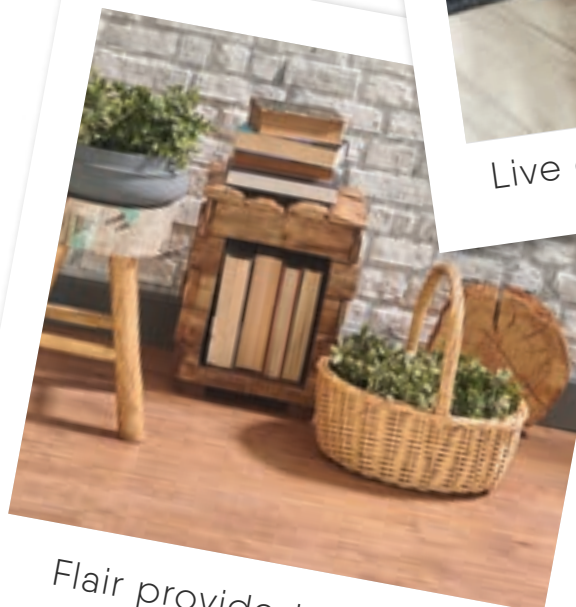

Wood regulates air. It takes excess moisture out of the ambient air and releases it again when the surrounding air is dry again.

Wood has its own charisma, its individuality is reflected not just in the way it looks but also in the way it feels when you touch it.

Live comfortably the natural way

Flair provided by details

Being in the presence of wood is often experienced as something pleasant even before people consciously think of it as being a natural material.

Limba

To manufacture the LEBO veneer doors we use only selected simple or beautifully combined fine wood veneers. Wood is a naturally growing material. This means that veneer strips can vary in colour, structure and consistency. There may even be variations within a single veneer strip. These natural characteristics make our products authentic and mean that each element of the door is a unique object in itself.

The highest demands for quality can still be made on classic and timeless designs!

The Elegance series of highly stylish doors provides real wood surfaces veneered on frames with solid wood battens (Elegance 1 & 2) or real wood panels (Elegance 15).

Light openings, even when they are used in combination with trellis frames, let additional light into our rooms and brighten up the atmosphere for living!

Create a new feel!

Wood- glass doors

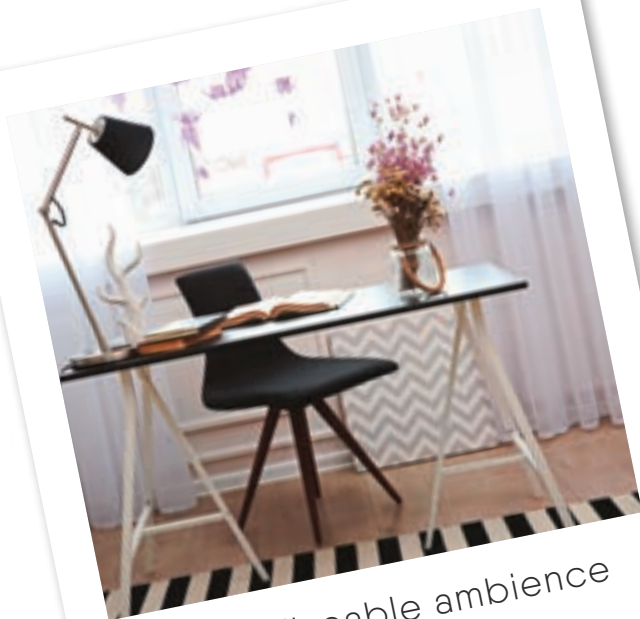

Wood-glass doors

Expertly combined materials

The decorative wood-glass doors from LEBO combine the timeless brightness of glass with the pronounced variety of designs of wood doors.

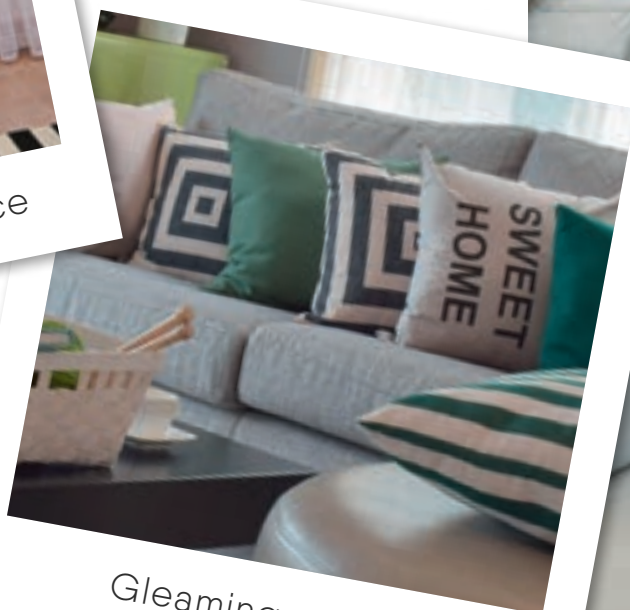

You can therefore combine wooden decorations with attractive light openings and glass surfaces. Whether you choose, transparent or satinised finishes, or light openings with trellis frames: our wood-glass doors suit modern, country and conventional living styles.

Together with beautiful windows, our wood-glass doors make the light sparkle into your living areas in a natural way.

Bright liveable ambience

Individual colour accents become more lively with natural light.

Many of our CPL surfaces in wood décors are available both in vertical and horizontal. The wood grain of the frames always runs vertically on the upright parts and horizontally on the top part.

Bring some light to the dark!

Elegant glass doors

As partners for colours and designs

Because of their smart and low-profile appearance, glass doors are especially good for combining with colours and designs.

Our tip: When glass is used in the design itself, this always creates a particularly harmonious effect.

Harmonised

Full-glass door Luana 1 matt, hinges „Office“, lock „Studio“, frame RR in white lacquer 9010

Modern glass doors

Timelessly bright and elegant

LEBO's glass doors let the light stream through your rooms. Available in both simple and decorated glass, these products stand, more than virtually any other products, for a modern and straight-lined style of living.

The light makes your rooms feel pleasant and friendly. It makes living areas seem more spacious. It makes big rooms seem even more impressive. Of course you will also find sliding doors in our glass door range.

Glass doors

Full-glass door Luana 1 clear, Hinges „Office“, lock case „Puristo“

Perfect match!
Our LUANA
wooden door
from page 48!

Luana stands for multi-talent and top seller at LEBO! Because it fits any interior and on top of that it is available as a lacquered door, wooden door with glazings and full-glass door. Decide, which may move in your home!

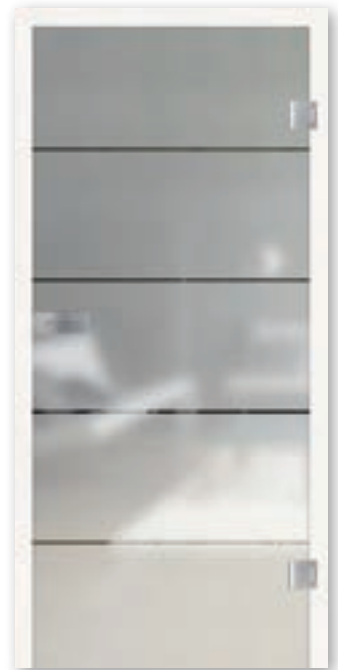

Clear

Satinated

Luana 1 clear

Luana 1 matt

Take a look at our entire glass collection in our separate catalog.

Glass colours

LEBO supplies all glass doors in green (float) glass as standard. All models are available in white and grey glass at extra cost.

Screen print

Enamel colours are applied to the properly prepared float glass and are then burnt into the the glass surface using the final "pre-loading" process. (The float glass becomes a single pane of tempered safety glass.) This creates a scratch-resistant and UV-resistant coating.

Note: This is a translucent surface and therefore not opaque.

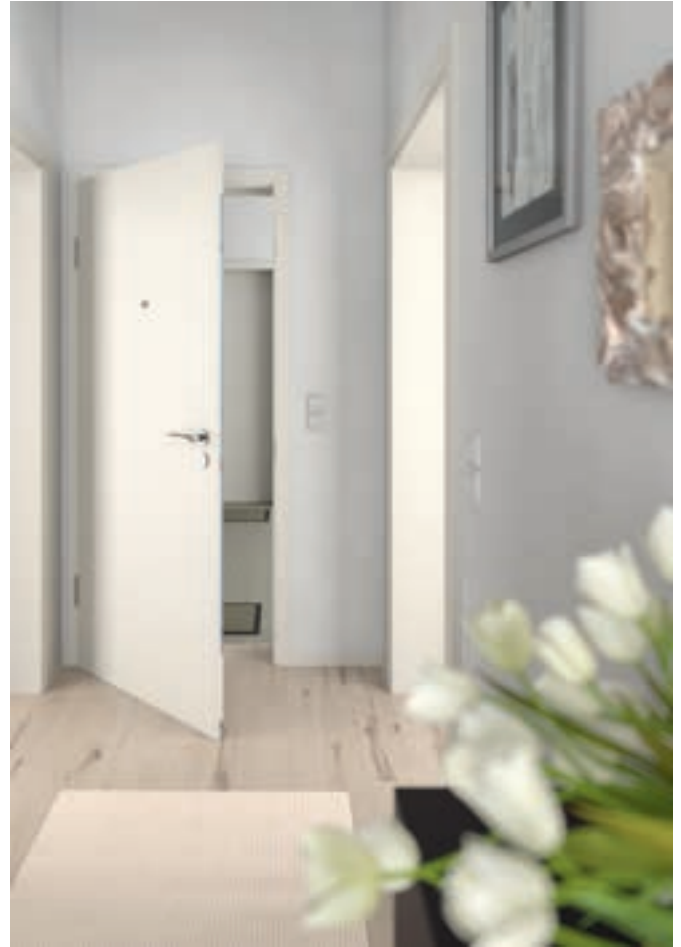

Functional doors

Robust & Resistant

No matter whether new construction or refurbishment/modernisation, LEBO offers the right door for every area of the house. Whether burglar-resistant doors for the apartment, cellar or garage entrance, fire-retardant doors for the boiler room or soundproof doors for more peace. Functional doors from LEBO make sure that you feel well and safe in your home.

Even in properties where building codes or health regulations dictate the use of these special doors, functional doors from LEBO are the perfect choice. Construction and material are strictly controlled and tested and thanks to the variety of design options, they combine safe technology and outstanding design.

- > Fire protection doors
- > Smoke protection doors
- > Burglar resistant doors
- > Soundproofing doors
- > Climate protection doors
- > Thermo doors
- > Damp room doors
- > Wet room doors

Function and usability – a quick guide:

Fire protection

Fire doors prevent the spread of fire, ensure escape routes in case of fire and facilitate the rescue of people and values.

Smoke protection

Smoke protection doors protect people from the life-threatening effects of smoke. During a fire they prevent choking caused by the depletion of oxygen.

Burglar-resistant doors

Burglar resistant doors can withstand attempted break-ins using physical force for longer periods of time. They protect material and intellectual property against theft and robbery.

Soundproofing doors

For well-being good sound insulation is important. Soundproof doors from LEBO keep the noise out and ensure more peace and quality of life.

Climatical stress

Climate protection doors prevent warping / bending of a door leaf due to different climatic conditions (air humidity, temperature) of the rooms connected by them.

Damp-room protection

Damp-room doors are used in areas in which the air humidity can easily be increased or where there are water sprays (e.g. In bathrooms without ventilation).

Mechanical stress

The LEBO functional doors can cope with the highest levels of mechanical stress and are available in stress groups (S and E).

KiTa door

The KiTa edge with optional finger protection minimises the risk of injury from sharp edges / corners, rough surfaces and protruding parts.

Safety in every situation

Technical details & accessories

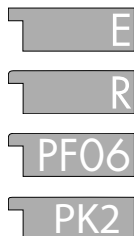

The door

Basic facts from A – Z

1

Door leaf/frame

Door leaf – squared
Door leaf – round
Door leaf – round (PF06)
Door leaf – round (PK2)

2

Surface

The surface is the visible outer side of the door leaf and is made of wood veneer, veneer, CPL, lacquer or glass. Look at pages 138 to 141 for an overview.

3

Lock & locking plate

The types: Warded lock (BB), Profile cylinder lock (PZ) and WC lock. You can see pictures of all three types on pages 132-133. The locking plate on the frame forms the right counterpart to it.

4

Core

Tubular chipboard strips (RSS)

Tubular chipboard (RSP)

Solid chipboard (VSP)

5

Wooden frame

This is the fixed part of a door set, into which the moving part, the door leaf, fits. It is also used as the base for the hinges which connect the door leaf to the frame.

You can find out about our different types of frames on pages 120-129.

6

Sidelight/Top light

Storey-high doors go up to the ceiling. Door sets with sidelight or top light complete the frames. You can find more information about these on pages 128-129.

7

Door closers

Our door closers automatically close our swing doors in a controlled manner after they have been opened.

8

DIN left/DIN right

The opening/closing direction of the door.

DIN left

DIN right

9

Hinges

The hinges connect the door frame to the door. These are used to allow the door to swing and for installing and removing the door – see pages 134-135.

10

Ventilation grilles

Our ventilation grilles are used for the ventilation of and extraction of air from rooms, which, for example, do not have their own windows or ventilation systems or which have high levels of air humidity.

11

Drop seal

To prevent the unhindered travel of sound waves and air currents between the floor and the door, we recommend the use of our integrated drop seal. It also helps to save heating costs!

12

Spy hole

You can prevent the entry of unwanted visitors into your rooms using our spy. By using our spy, you can see who is at the door without having to open it.

13

Handle

The handle is one of the basic design components of the door. The design of the handle should harmonise with the style of the door set and with the hinges.

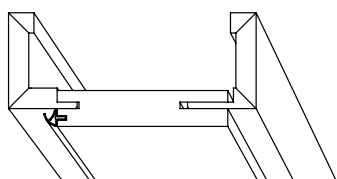

You can find explanations of even more of our specialist terms here!

Frames

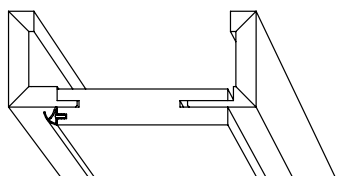

Completely according to your taste

The frame surrounds your door and for this reason, you should make sure that the door leaf goes with the door frame when selecting your door element. At LEBO you can have the door leaf and frame for your dream door, either in a flush-optic or full-flush design (see pages 122–123). The standard delivery for both doors and frames is in a rebated design, as shown here.

EE (Squared Squared)

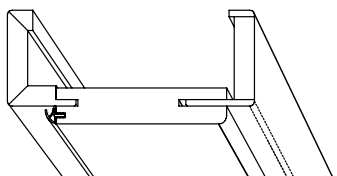

The classic design with a squared jamb and a squared, 60 mm-wide architrave.

EE & RR with V-groove

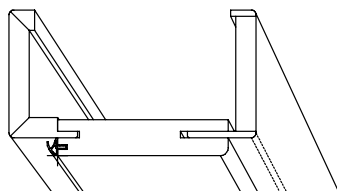

You can also have our EE and RR frames with a V-groove. The special thing about it:

- lacquered
- easy to install
- visually accented mitre joint

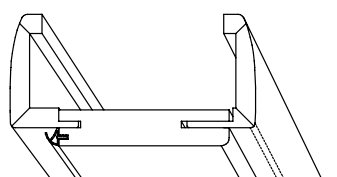

RR (Rounded Rounded)

Our best-seller with a rounded jamb and a rounded, 60 mm-wide architrave.

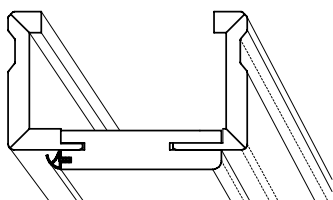

RR80 (Rounded Rounded)

Rounded jamb and rounded architrave, 80 mm wide. Ideal for renovation work.

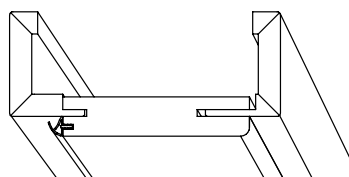

RB04 (Rounded Cambered)

Cambered and concave to the wall, the 71 mm-wide architrave creates a harmonious overall appearance.

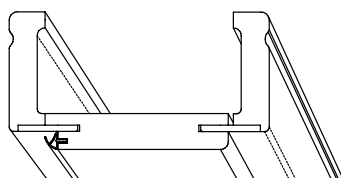

RP17 (Rounded Profiled)

With a width of 80 mm and a milling of 20 mm the RP17 offers a special frame for our White Lacquer classics. But also plain door leaves in white Lacquer can be revalued by this frame type.

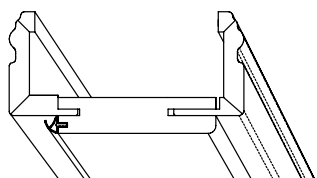

RE (Rounded Squared)

This white frame has a very elegant look, a rounded jamb and a 60 mm architrave with a small 2 mm radius.

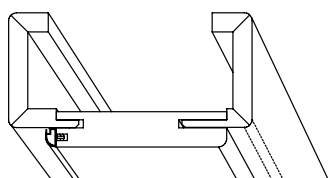

RP07 (Rounded Profiled)

Simple elegance in white with a milling in the 75 mm-wide architrave.

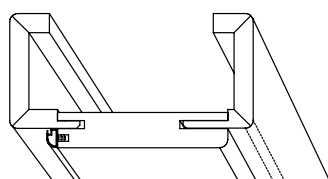

RP09 (Rounded Profiled)

An elegant classic in white for classic door models, with a strikingly profiled 65 mm wide architrave.

RRAD

Lengthways slits and a 72 mm architrave create a special visual appearance. (The cross architrave is set back by 3 mm.)

RRA

Rounded jamb and rounded architrave, 72 mm wide and 25 mm folding. Ideal for deeper skirtings.

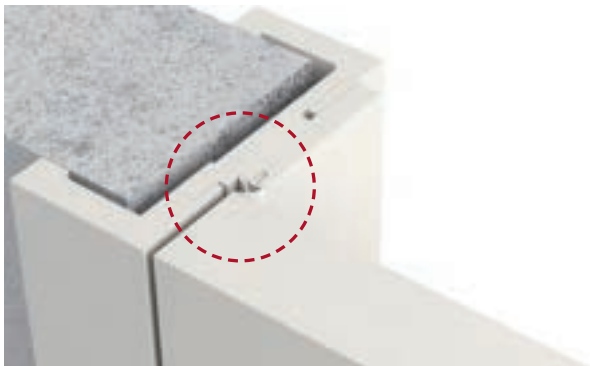

Frames

Full-flush and flush-optic

The frame surrounds the door and is firmly attached to the wall surrounding the door. It is used to secure the door leaf in place. This is performed using the hinges attached to the frame and to the door leaf. Frames are available in a wide range of visual and functional designs. According to the combination of frame and door leaf used, doors can be described as being either "full-flush" or "flush-optic" doors.

Full-flush doors

In full-flush doors, the door leaf and the frame are flush. These are particularly effective in very modern rooms.

Flush – The door leaf is flush and in its external appearance it is on the same level as the sealing level.

Use Tectus-hinges TE 340

Flush-optic doors

The door leaf is rebated. Seen from the opening side, however, it looks like a full-flush door. From the closing side, you can see a shadow gap running around it. A normal frame can be used for this model.

Flush-optic – The door leaf is rebated and closes flush with the frame.

Use Tectus-hinges TE 240

Important note

In full-flush and flush-optic door sets, the door surface does not close completely flush with the architrave of the door frame.

Your door in full-flush or flush-optic will look
beautifully harmonious.
(Model: "Custom-milled Toilet")

Frames

Flush Systems

Aalto frame White Lacquer 9010, glass satinated, hinges TEG 310 2D, Element in full flush, White Lacquer 9010

Series Aalto

Flush surface unites function and aesthetics

We want to follow the trend towards new simplicity in our designs – focusing on the essential and functional, without losing the sense of aesthetics. This ambition has led us to develop the series „Aalto“. It stands for a product solution in which all the requirements of a modern design are met.

There are absolutely no drillholes, so that no more devices are necessary. Use of the magnetic closure and a bondable handle does not require any machining of the glass. The opening direction and hinge side thus remain variable (distinction of the door leaf between right-hung and left-hung no longer necessary).

The advantages of Series Aalto:

- › As the door leaf, frame and hinges lie in one plane, the Aalto series forms a perfect partner for our other flush door sets.
- › The stylish handle and the minimalistic hinges integrate far more harmoniously into the door set than conventional solutions
- › The closing magnet and magnet plate on the door enable non-contact and noiseless closing

Available for
wooden and full-
glass doors!

Frames

Flush Systems

Series Düsseldorf

For lovers of modern design

For lovers of modern and clean design, we have developed the series Düsseldorf. Besides the very clear expression of forms, this series convinces with a very well thought-out construction: wall and door leaf attach to each other by appearing flush, while the construction of the frame stays invisible.

To achieve a clean overall look, the skirting board can as well be integrated flush to the wall. The result is a high-quality door set which fits perfectly into a contemporary surrounding that is focussed on selected materials.

Series Düsseldorf / flush / White Lacquer 9010 / aluminium frame TCS

The advantages of Series Düsseldorf:

- > high quality materials
- > flush design
- > invisible frame construction
- > flush skirting board possible
- > clean design

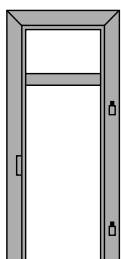

More about this
system in our flyer!

Storey-high, sidelights & top lights

Completely according to your taste

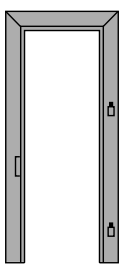

1-flg. gmK

Single-leaf frame
with transom.

WT 1

Sidelight door set,
door-high,
with a fixed sidelight.

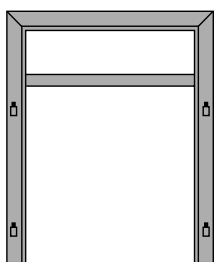

1-flg. goK

Single-leaf frame,
storey-high.

WG 1

Storey-high door set with a fixed
sidelight and a top light.

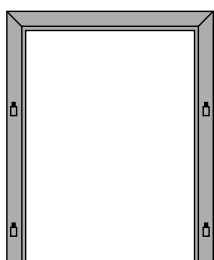

2-flg. gmK

Doubled-leaf frame,
with transom.

WT 2

Storey-high door set, door-
high, with two fixed sidelights

2-flg. goK

Double-leaf frame,
storey-high.

WG 2

Storey-high door set with two
fixed sidelights and a top light.

**One room,
three possibilities.**

Storey-high, sidelight and top-light door sets are particularly good for creating the impression of more space and, in combination with glass sidelights or a top light, they allow significantly more light into the room.

Especially in the areas just inside apartment-entrance doors or in hallways where there is less space available, rooms become brighter and look bigger this way.

We prepared the identical room with our WG2, WT2 and WG1 variants for you. Compare yourself.

Accessories

Easy opening and closing

Comfort Close is an optimal partner for interior doors with a modern look: the locking system keeps the door leaf closed by a magnet.

Detailed view: closing magnet

Detailed view: magnetic plate

The advantages of Comfort Close:

- › Contact- and noiseless open and close
- › Maintenance-free system
- › The retention force is individually adjustable, reliable and durable.
- › Simple and comfortable handling: the door leaf is closed by the magnetic contact.

This fits:

- › Besides our smooth doors, our modern style & design doors combine particularly well with this system.
- › You can choose out of a variety of fittings to screw or glue-on.

Detailed view: full-glass door

Please note

Comfort Close is available for all our full-flush and flush-optic door sets (see page 122) in all available surfaces.

Say Goodbye to Door Slamming & Door Stoppers

A really helpful feature for everyday life! Concealed and thus an „invisible“ helper, which on top of that is absolutely maintenance-free. For soft closing and secure holding of the door in the desired position...

Detail view Active Stop

Opening angle / holding position configurable

The advantages of Active Stop:

- › **Soft stopping:** when opening the momentum is slowed down and then stops the door in the desired position. This prevents damage to the wall and furniture.
- › **Comfortable keeping open:** the opening angle can be configured individually so the closing of the door is prevented – a door stopper is not necessary anymore!
- › **Silent closing:** through active damping, the door closes slowly and quietly. Loud slamming and door damages are avoided – additionally minimizing the risk of injuries.

Opening angle and hold position:

- › **Variable holding position between 80° and 140°**
The desired opening angle is at the same time holding position and can be variably adjusted between 80° and 140°.

Attenuation and freewheel:

- › **Damping and closing from 25°**
The closing door is gently braked from an angle of 25° and automatically latched.
- › **Freewheel between 25° and 60°**
In this area, GEZE ActiveStop lets your door run freely. And no matter how much momentum the door has – the damping starts reliably and safely at 25° when closing and at 60° when opening.
- › **Damping and holding open up to 140°**
From 60° the opening door is gently braked and automatically opened up to the individually adjustable holding angle of max. 140°.

Important

Active Stop is available for all full-flush and rebated wooden door sets. For an optimised functionality we recommend at least the tubular-chipboard core (RSP). Cannot be combined with a drop seal, as the damping technology, which softly stops the door and then automatically closes it, is impaired.

Accessories

Handles

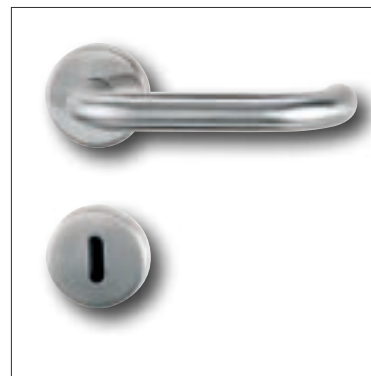

It is well worth paying attention to the beautiful details so that you will be able to enjoy looking at your doors for a long time to come! Nice upgrade: 3-parted hinge

Standard 2-parted hinge

Profile cylinder lock (PZ)

NEW: 3-parted hinge black matt

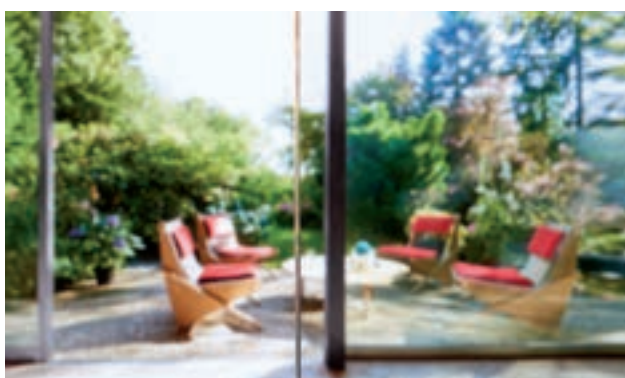

NEW: 2-parted hinge black matt

Accessories

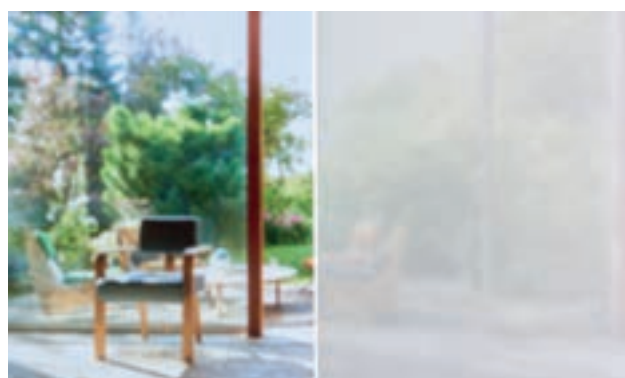

Glass variants

Doors with a light opening and full-glass doors are bang on trend. Their benefits: They allow light into the room, even when closed. Rooms and corridors appear brighter and more spacious. Here you can see some different models for your doors with a light opening. You can find our full glass doors on pages 110–113.

In our glazings we use single-pane safety glass (ESG) as standard. Analogous to our full-glass door range, our glazings are available as float (green), white or grey glass variants.

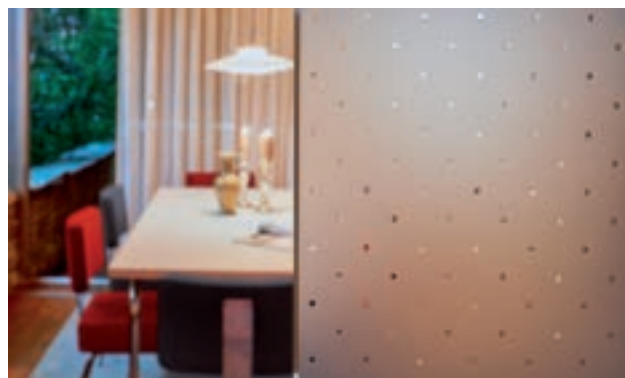

Clear glass

Satinato

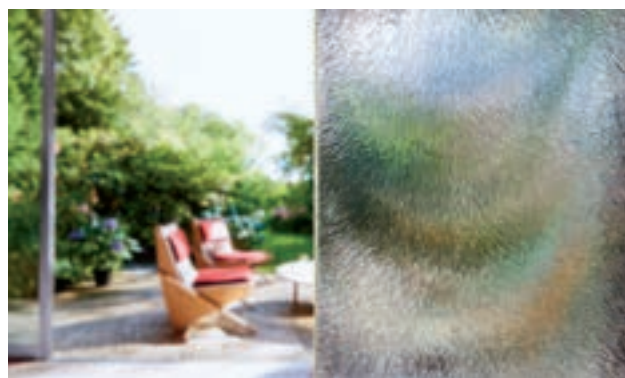

Master point

Pave

Cathedral White

CIA

Uadi

Mastercareé

Negative

Ornament 504

Positive borders clear / Negativ: borders matted

Living Space Dream

Your LEBO Door

Door service means at LEBO, that we build your dream door for you. But above all, that we help you to find exactly the door that really fits you and your style... and that applies also for projects such as hotels, public facilities or other commercial buildings.

With the LEBO professionals, the new construction or renovation is a completely reliable and beautiful thing!

In particular, you benefit from the efficient cooperation between your LEBO dealer and our experienced LEBO team, whereby your LEBO dealer stays always your personal contact. Both together, we provide a carefree package that you can rely on.

We look forward to working with you to make your new living space come true.

The easiest way to new LEBO doors is via the exhibitions of our LEBO partners and professionals.

In the exhibitions you can touch different surfaces, check the different technical features and get a secure sense of the spatial dimensions and proportions your new doors should have.

Our professional partners show you the latest trends and timeless designs. Get inspired!

Your LEBO partner will also be happy to help you with the planning. They advise you on the spot, from the first sketch, the requirements and characteristics, which your doors should offer for your intention, from a correct measure up to the appropriate delivery and professional installation of your new LEBO doors.

Conception.
Product selection.
Installation.

For example:

LEBO has furnished the "Silva Peak Residences" – a set of apartments in the fabulous ski resort of Galtür in Austria with more than 31 door sets in Quirin Knotty Oak. We therefore created an alpine feel using both modern and traditional design elements.
